

CELLCOMB

*Cellcomfort bed protecting for home care –  
a new way of thinking*

# *Incontinence protection today*

## **New conditions**

The development and improvement of the ability of incontinence pads to absorb and avoid leakage has probably never been better. From this perspective, it is far from always a bed protection with super absorbent ability is needed. Therefore, in the vast majority of situations, it is sufficient to have a bed protector with a certain absorbency where the focus is more on comfort, strength and the environment. That is why Cellcomb has developed its Cellcomfort bed protecting series.

Therefore, Cellcomb's mission is: To phase out unnecessary chemicals in home care's bed covers, offer a more comfortable product range for the user, a better product for the environment with less material use and that also meets the tough demands of home care

## Those who have already taken the step

For many years, Region Skåne has chosen Cellcomfort Bed Protector disposable protection that is prescribed for care in the home. This is what contract manager Eric Donaldson says:

"We in Region Skåne have now had Cellcomfort bed protecting 198001 from Cellcomb on our Incontinence Agreement for a long time, and the feedback I have received from the users is that the product is very much appreciated"
