We address needs in areas with tough challenges and high demands. What we do has an impact on people's health, quality of life and well-being. Our goal is to offer the most sustainable solution for the future of our environment and economy.

Our Vision and Values

We are a leading manufacturer of disposable eco friendly laminates. Through our solutions we contribute to the circular economy.

Operating from our production plant in Säffle, Sweden. Our business areas are **Med Tech**, **Food Tech**, **Hygiene** and **HomeAway**, serving customers worldwide.

Privately owned by investors, our mission is to create and operate a new industry standard. Our vision is to be the first choice for operators seeking the highest

levels of safety, security and comfort, without compromising on climate, profitability or the working environment.

We give you opportunities to make choices that reduce risks, increase the quality of life and save resources.

Foodtech

ABSORBING FOOD PADS

Focus on food safety and reduced food waste, based on organic materials.

To us it is instrumental and a given, to cover all aspects – from the packaging solutions all the way to the dinner table and further on in a sound eco-system. We never take any shortcuts, nor do we compromise.

Right now, a lot of initiatives focus on safety and sustainability in combination with food which is a key necessity in many ways.

According to the Swedish Food Agency's calculations, a third of all food that is produced never ends up being eaten. Food waste is a big threat to our climate and a big loss of our planet's resources, but together with our clients, we want to fight these numbers. This contributes to maintaining one of the UN's Sustainable Development Goals, namely to half all food waste by the year 2030.

Medtech

MEDICAL SHEETS AND PROTECTION

Innovative solutions from renewable materials for safer medical care.

Requirements in hygiene, safety and efficient approaches within health and elderly care are demanding. Based on our long experience, we are aware of what needs and challenges occur daily. This is why Cellcomb knows what it takes to protect the industry's standards.

Cellcomb Medtech provides solutions for healthcare that ease the workload in a wise, sustainable and secure way. With development and production based in Sweden, we have full control from blueprint to manufacturing which secures high quality throughout the whole process. In addition to this, our solutions are resource optimized which benefits healthcare from several perspectives.

Another important, ongoing objective is to relieve hospital staff that work closely with patients as this can contribute to shorter care times.

Hygiene

DIAPERS AND PANTY LINERS

Sustainable, comfortable and safe laminate for diapers and panty liners.

Solutions intended for personal hygiene and enuresis care such as panty liners, sanitary napkins and diapers, have high demands in comfort and function with clean, organic materials.

At Cellcomb we take it one step further.

The climate, future generations and our health are important aspects of life. Therefore, we are specialized in sustainable solutions. Our laminate is manufactured in Sweden and in many cases produced out of renewable raw materials that are compostable.

Our combination of efficient manufacturing and high capacity of roll goods creates possibilities for customization depending on your needs. This makes us a clear partner in producing hygiene and enuresis products.

HomeAway

A SUSTAINABLE ALTERNATIVE TO TEXTILES

Offer your guests quality and comfort as well as a sustainable alternative to textiles.

Regardless of when, where and how, a good night's sleep in comfortable, soft materials is always desirable. Based on our experience, this can be a challenge for short-term accommodations with a lot of visitors as bed sets are changed frequently. In addition to this, washing and storage possibilities can also be more limited. Our solutions entail crisp, soft sheets and towels ensuring comfort as well as contributing to a better climate.

Cellcomb Homeaway consists of sustainable solutions for short-term use, convenient in many different areas of use. The range was developed as a sustainable alternative to textiles. They are the perfect option if you want to sleep comfortably, save time and the environment. At the same time, reducing the workload for employees in the hospitality industry is addressed as they only weigh 1/5th as much as conventional cotton alternatives, are compact, flexible and do not require any washing.

Foodtech

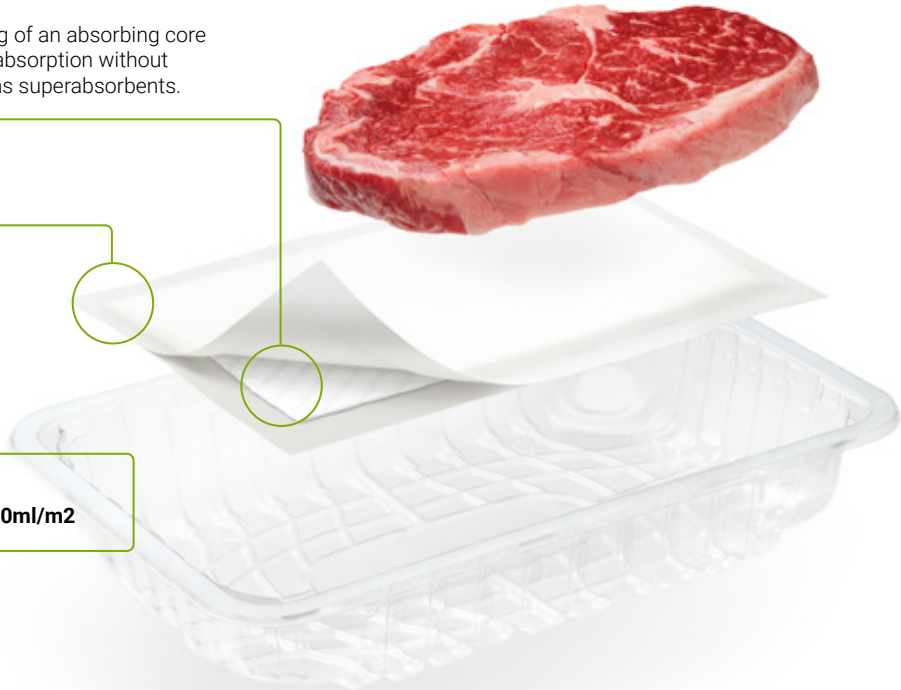

Absorbing
food pads

Focus on food safety and reduced food waste, based on organic materials

With our innovative technology consisting of an absorbing core completely in cellulose, we reach a high absorption without adding any unnecessary additives such as superabsorbents.

All edges are sealed ensuring the highest possible food safety.

Absorption water: 5000ml/m²
Absorption 0,9% saline solution: 2500ml/m²

PUTTING TRUST IN YOUR FOOD

Food safety has never been higher on the agenda. Grocery retailers, distributors and end-consumers demand being able to trust that liquids and chemicals are locked away and the fresh food will remain just that: Fresh, even in appearance. That's why, when packing your food, you are actually packing much more: a promise of unquestionable food safety, hygiene and value.

4-SIDE SEALED EDGES

Cellsorb Circular closed food pads are placed in VAC packaging and MAP trays. Superfluous liquids from the food pass through the bottom and top layer to be absorbed by the kernel. The liquids are sealed inside the kernel for a prolonged time.

Since the pad is closed, no fibers in the absorbent kernel are released to be in contact with the food, as can be the case with traditional open-edge food pads.

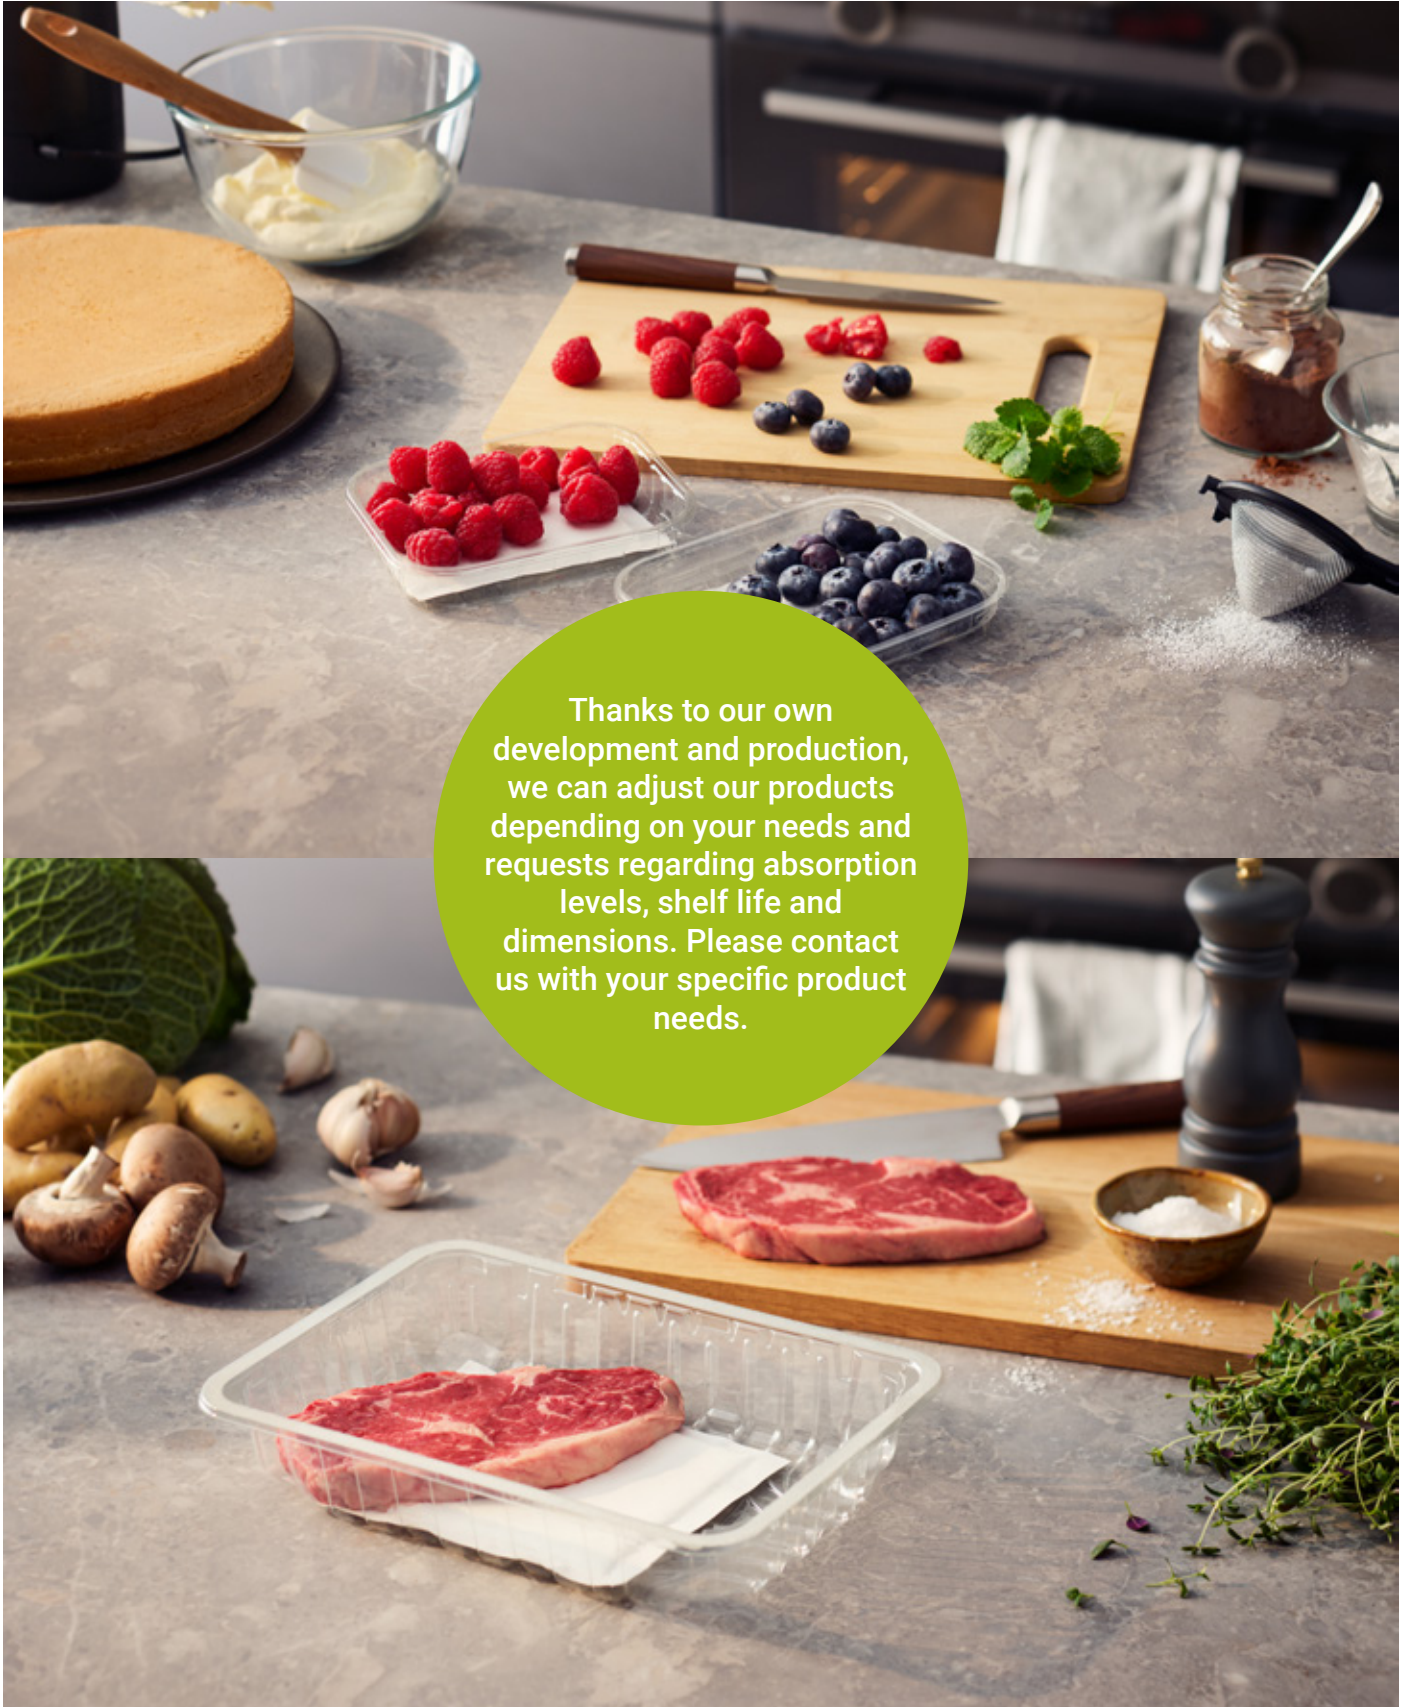

CIRCULAR SOLUTIONS

Circular contributes to plastic reduction in food packaging. The mono-material design is eco-friendly, highly absorbent and with the added benefits of prolonging the storage life. It is compliant with the EU packaging directive for 2030 as recyclable in the paper stream and applicable for industrial compostable (EN13432). It will also help reduce the usage of plastics in fresh food packaging industry.

CELLSORB CIRCULAR - PLASTIC REDUCTION

When you choose Cellsorb Circular pad, your company will be able to reduce the usage of plastic materials in the packages. The traditional pad has a high amount of plastic which cannot be recycled since it consists of a mix of materials, e.g the kernel as often is filled with SAP/SAF (Super absorbent powder/fibers). Choosing Cellsorb Circular pads puts an end to this issue and help your company to achieve expected future benchmarks for 2025.

Foodtech

Responsible Sustainability For The Future

Cellsorb CIRCULAR – Pure cellulose

The most innovative and sustainable choice for responsible food packaging.

Cellsorb CIRCULAR offers is a highly efficient, cellulose mono material absorber, giving an opportunity for significant plastic reduction and circular food packaging.

Cellsorb CIRCULAR is available for brand owners and producers to make a wise choice that reduces the environmental impact of the food packaging industry.

- Cellulose mono material
- Free from super absorbents
- 4 side sealed edges
- Suitable for all types of fresh groceries
- Highly absorbing core
- Recyclable
- Made in Sweden

Absorbing Food pads Cellsorb CIRCULAR

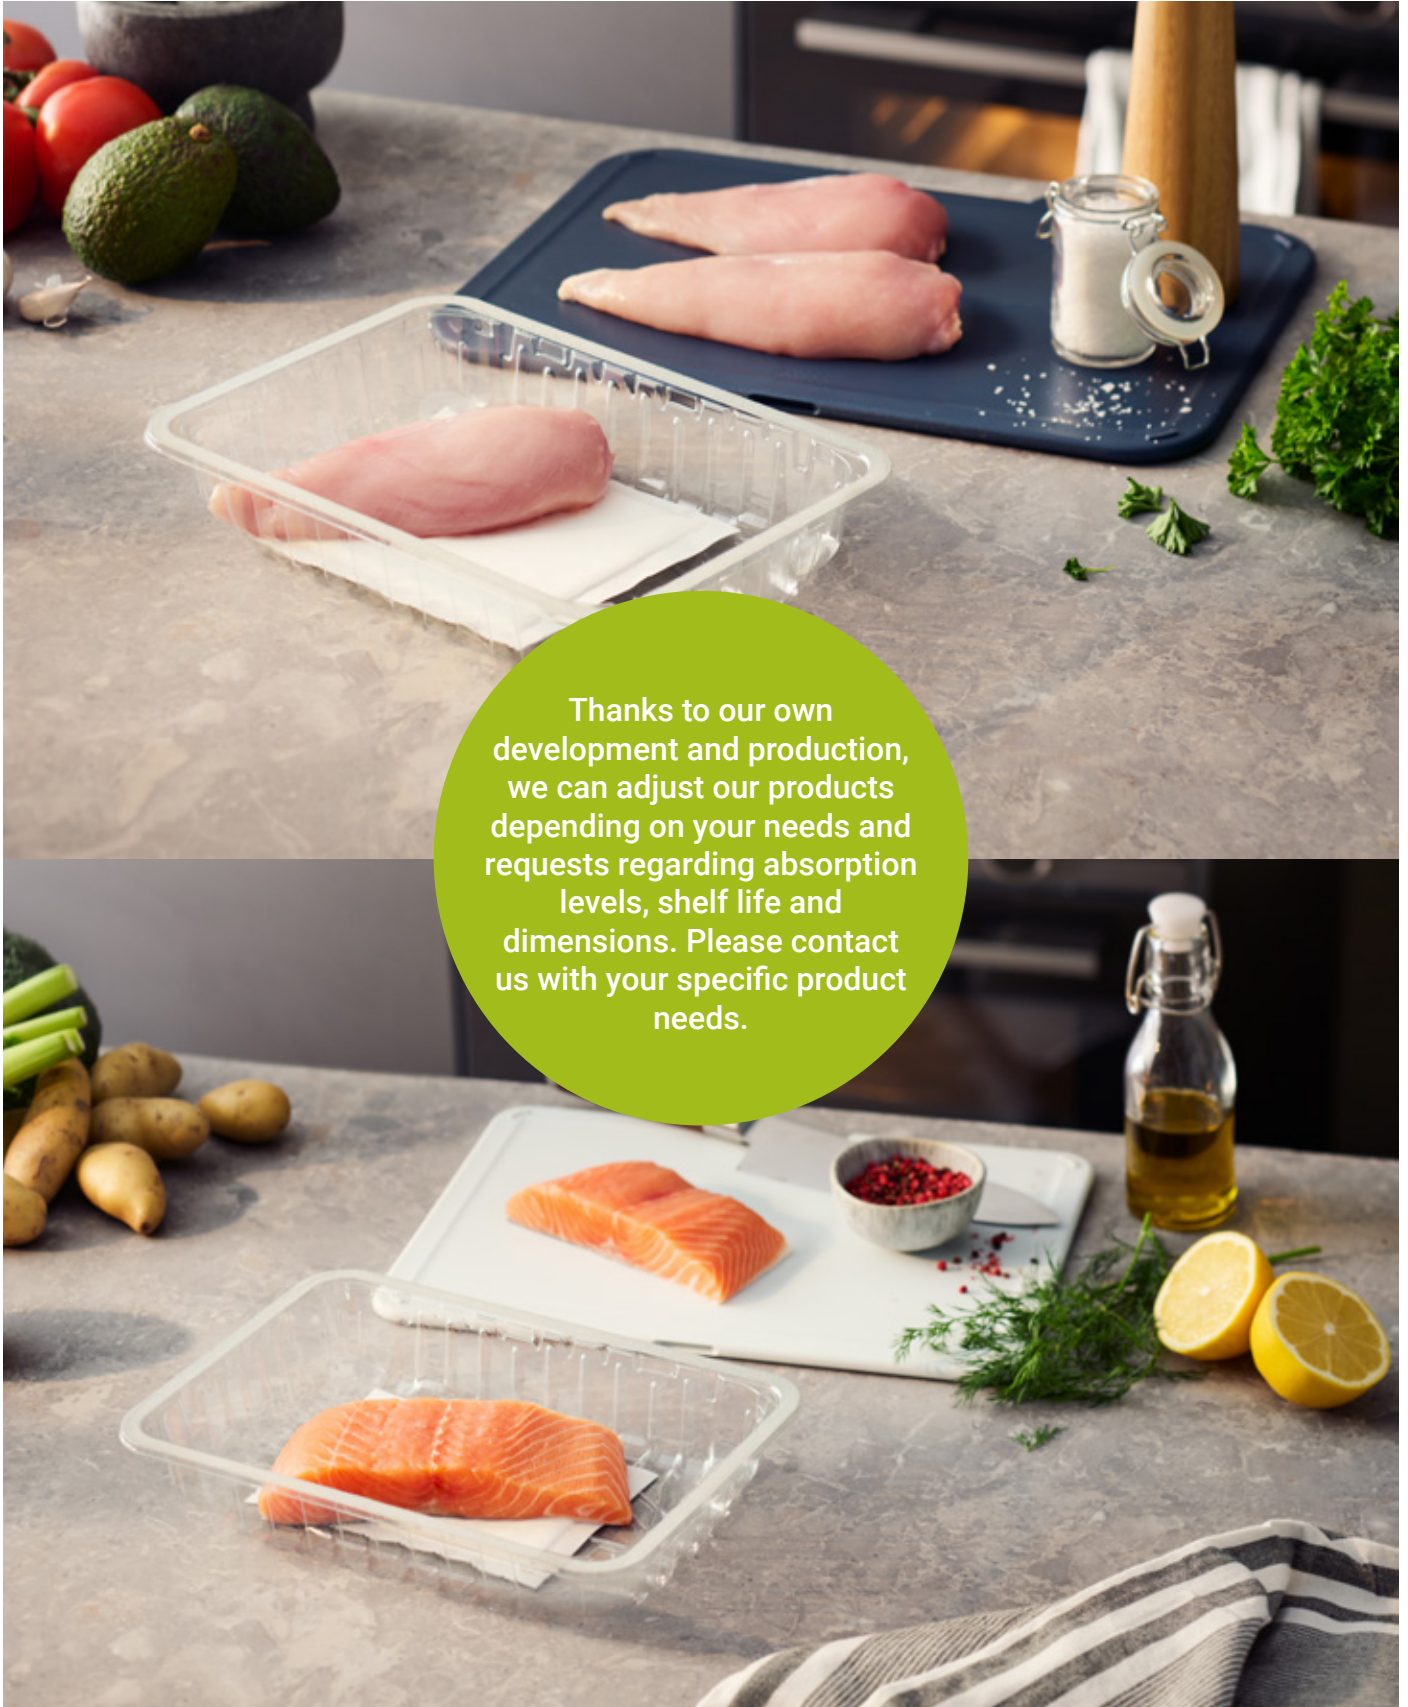

Cellsorb Circular food pads assortment consists of a wide range of different sizes and absorption capacities to fit different kind of foodstuff as well as different types of packaging.

Item no.	Name and description	Size (mm)	Absorption	Material
30020	Cellsorb Circular	80x80	10-15ml	Cellulose
30028	Cellsorb Circular	80x100	10-20ml	Cellulose
30022	Cellsorb Circular	80x120	10-25ml	Cellulose
32011	Cellsorb Circular	90x135	15-30ml	Cellulose
32004	Cellsorb Circular	100x150	20-40ml	Cellulose
32016	Cellsorb Circular	120x160	25-50ml	Cellulose
32009	Cellsorb Circular	150x200	50-90ml	Cellulose
32018	Cellsorb Circular	150x300	70-110ml	Cellulose
32019	Cellsorb Circular	300x500	200-400ml	Cellulose
32023	Cellsorb Circular	300x700	300-600ml	Cellulose
